PREFACE AND ACKNOWLEDGEMENTS

The 2010 Population and Housing Census (PHC) is the fifth census conducted in Ghana since independence. Previous post-independence censuses were conducted in 1960, 1970, 1984 and 2000. The 2010 PHC was carried out with reference to 26th September 2010 as the Census Night. Enumeration was completed in November 2010 and data processing ended in May 2012. To facilitate optimal use of the data collected, a set of statistical tables will be produced in accordance with the census tabulation plan. Further analysis of the census data will be carried out and analytical and thematic reports produced and widely disseminated.

This Summary Report of the Final Results is the first in a series of publications to be released. It contains priority tables required by most Ministries, Departments and Agencies (MDAs), Metropolitan, Municipal and District Assemblies (MMDAs), Development Partners, the private sector, researchers and other stakeholders for a variety of purposes, such as policy formulation, planning, programme implementation, monitoring and evaluation.

The report presents information on population and housing characteristics for the entire country, the ten administrative regions and the 170 districts that existed at the time of the Census. It also includes data on new topics which were included for the first time in the 2010 Census such as emigration, ICT, agricultural activity, deaths in the household in the last 12 months, pregnancy-related deaths and disability.

The conduct of any exercise of the magnitude of a census would not have been possible without the massive mobilization and utilization of human and material resources. We therefore, wish to express our profound appreciation to all the individuals and organisations that contributed to the effective planning, organisation and implementation of the census.

We particularly wish to thank the Ministry of Finance and Economic Planning, the Controller and Accountant-General's Department and the Bank of Ghana for releasing funds for the Census. Our gratitude also goes to the Ministry of Education, Ministry of Information, Ministry of Defence, Ministry of Interior, the Ghana Education Service, National Identification Authority, Electoral Commission, Ghana Armed Forces, Ghana Police Service, Ghana Immigration Service, Ghana National Fire Service, Information Services Department, National Commission for Civic Education and all other MDAs and MMDAs for the roles they played at the different stages of the census.

We acknowledge the immense contributions of the United Nations Population Fund (UNFPA), Department for International Development (UK-DFID), European Union (EU), United Nations Development Programme (UNDP), United Nations Children's Fund (UNICEF), and the Embassy of the People's Republic of China. We also wish to acknowledge project funding support for the census data analysis from the Danish International Development Agency (DANIDA) and the Canadian International Development Agency (CIDA).

We are grateful to the media in general and the UNFPA supported Media Communication and Advocacy Network (MCAN) for publicising the census activities and conveying messages from the public to the Ghana Statistical Service which greatly enhanced the conduct of the census. We also wish to thank chiefs and community leaders as well as the general public for their cooperation.

We are indebted to the field personnel, the census monitors, Regional and District Census Officers, Regional and District Administrative Offices, Regional and District Census Committees, National Census Steering Committee, National Publicity and Education Committee, and the Census Technical Advisory Committee for the roles they played in the implementation of the census. To all Consultants who were engaged on the various aspects of the census, we are most grateful.

Finally, we wish to express our appreciation to the data processing assistants and all GSS staff for their dedication.

ACTING GOVERNMENT STATISTICIAN

MAY, 2012

CONCEPTS AND DEFINITIONS

Introduction

The 2010 Population and Housing Census of Ghana followed the essential concepts and definitions of a modern Population and Housing Census as recommended by the United Nations (UN). It is important that the concepts, definitions and recommendations are adhered to since they form the basis upon which Ghana could compare her data with those of other countries.

The concepts and definitions in this report cover all sections of the 2010 Population and Housing Census questionnaires (PHC1A and PHC1B). The sections were: geographical location of the population, Household and Non-household population, Literacy and Education, Emigration, Demographic and Economic Characteristics, Disability, Information and Communication Technology (ICT), Fertility, Mortality, Agricultural Activity and Housing Conditions.

The concepts and definitions are provided to facilitate understanding and use of the data presented in this report. Users are therefore advised to use the results of the census within the context of these concepts and definitions.

Region

There were ten (10) administrative regions in Ghana during the 2010 Population and Housing Census as they were in 1984 and 2000.

District

In 1988, Ghana changed from the local authority system of administration to the district assembly system. In that year, the then existing 140 local authorities were demarcated into 110 districts. In 2004, 28 new districts were created; this increased the number of districts in the country to 138. In 2008, 32 additional districts were created bringing the total number of districts to 170. The 2010 Population and Housing Census was conducted in these 170 administrative districts (these are made-up of 164 districts/municipals and 6 metropolitan areas). The six metropolitan areas in all have 33 sub-metros which the Statistical Service considered as districts for the purpose of the exercise. Thus, the total number of statistical districts was 197.

Locality

A locality was defined as a distinct population cluster (also designated as inhabited place, populated centre, settlement) which has a NAME or LOCALLY RECOGNISED STATUS. It included fishing hamlets, mining camps, ranches, farms, market towns, villages, towns, cities and many other types of population clusters, which meet the above criteria. There were two main types of localities, rural and urban. As in previous censuses, the classification of localities into 'urban' and 'rural' was based on population size. Localities with 5,000 or more persons were classified as urban while localities with less than 5,000 persons were classified as rural.

Population

The 2010 Census was a “de facto” count and each person present in Ghana, irrespective of nationality, was enumerated at the place where he/she spent the midnight of 26th September 2010.

Household

A household was defined as a person or a group of persons, who lived together in the same house or compound and shared the same house-keeping arrangements. In general, a household consisted of a man, his wife, children and some other relatives or a house help who may be living with them. However, it is important to remember that members of a household are not necessarily related (by blood or marriage) because non-relatives (e.g. house helps) may form part of a household.

Head of Household

The household head was defined as a male or female member of the household recognised as such by the other household members. The head of household is generally the person who has economic and social responsibility for the household. All relationships are defined with reference to the head.

Household and Non-household population

Household population comprised of all persons who spent the census night in a household setting. All persons who did not spend the census night in a household setting (except otherwise stated) were classified as non-household population. Persons who spent census night in any of the under listed institutions and locations were classified as non-household population:

- (a) Educational Institutions
- (b) Children's and Old People's Homes
- (c) Hospitals and Healing Centres
- (d) Hotels
- (e) Prisons
- (f) Service Barracks
- (g) Soldiers on field exercise
- (h) Floating Population: The following are examples of persons in this category:
 - i. All persons who slept in lorry parks, markets, in front of stores and offices, public bathrooms, petrol filling stations, railway stations, verandas, pavements, and all such places which are not houses or compounds.
 - ii. Hunting and fishing camps.
 - iii. Beggars and vagrants (mentally sick or otherwise).

Age

The age of every person was recorded in completed years disregarding fractions of days and months. For those persons who did not know their birthdays, the enumerator estimated their ages using a list of district, regional and national historical events.

Nationality

Nationality is defined as the country to which a person belongs. A distinction is made between Ghanaians and other nationals. Ghanaian nationals are grouped into Ghanaian by birth, Ghanaian with dual nationality and Ghanaian by naturalization. Other nationals are grouped into ECOWAS nationals, Africans other than ECOWAS nationals, and non-Africans.

Ethnicity

Ethnicity refers to the ethnic group that a person belonged to. This information is collected only from Ghanaians by birth and Ghanaians with dual nationality. The classification of ethnic groups in Ghana is that officially provided by the Bureau of Ghana Languages and which has been in use since the 1960 census.

Birthplace

The birthplace of a person refers to the locality of usual residence of the mother at the time of birth. If after delivery a mother stayed outside her locality of usual residence for six months or more or had the intention of staying in the new place for six or more months, then the actual town/village of physical birth becomes the birthplace of the child.

Duration of Residence

Duration of residence refers to the number of years a person has lived in a particular place. This question is only asked of persons not born in the place where enumeration took place. Breaks in duration of residence lasting less than 12 months are disregarded. The duration of residence of persons who made multiple movements of one (1) year or more is assumed to be the number of years lived in the locality (town or village) since the last movement.

Religion

Religion refers to the individual's religious affiliation as reported by the respondent, irrespective of the religion of the household head or the head's spouse or the name of the person. No attempt was made to find out if respondents actually practiced the faith they professed.

Marital Status

Marital status refers to the respondent's marital status as at Census Night. The question on marital status was asked only of persons 12 years and older. The selection of the age limit of 12 years was based on the average age at menarche and also on the practice in some parts of the country where girls as young as 12 years old could be given in marriage.

Literacy

The question on literacy referred to the respondent's ability to read and write in any language. A person was considered literate if he/she could read and write a simple statement with understanding. The question on literacy was asked only of persons 11 years and older.

Education

School Attendance

Data was collected on school attendance for all persons three (3) years and older. School attendance refers to whether a person has ever attended, was currently attending or has never attended school. In the census, school meant an educational institution where a person received at least four hours of formal education.

Although the lower age limit of formal education is six years for primary one, eligibility for the school attendance question was lowered to three years because pre-school education has become an important phenomenon in the country.

Level of Education

Level of education refers to the highest level of formal school that a person ever attended or was attending. This information was obtained for persons 3 years and older.

Activity Status

Activity status refers to economic or non-economic activity of respondents during the 7 days preceding census night. Information on type of activity was collected on persons 5 years and older. A person was regarded as economically active if they:

- a. Worked for pay or profit or family gain for at least 1 hour within the 7 days preceding Census Night. This included persons who were in paid employment or self-employment or contributing family workers.
- b. Did not work, but had jobs to return to.
- c. Were unemployed.

The economically not active were persons who did not work and were not seeking for work. They were classified by reasons for not being economically active. Economically not active persons included homemakers, students, retired persons, the disabled and persons who were unable to work due to their age or ill-health.

Occupation

This referred to the type of work the person was engaged in at the establishment where he/she worked. This was asked only of persons 5 years and older who worked 7 days before the census night, and those who did not work but had a job to return to as well as those unemployed who had worked before. All persons who worked during the 7 days before the census night were classified by the kind of work they were engaged in. The emphasis was on the work the person did during the reference period and not what he/she was trained to do. For those who did not work but had a job to return to, their occupation was the job they would go back to after the period of absence. Also, for persons who had worked before and were seeking for work and available for work, their occupation was on the last work they did before becoming unemployed. If a person was engaged in more than one occupation, only the main one was considered.

Industry

Industry referred to the type of product produced or service rendered at the respondent's work place. Information was collected only on the main product produced or service rendered in the establishment during the reference period.

Employment Status

Employment status refers to the status of a person in the establishment where he/she currently works or previously worked. Eight employment status categories were provided: employee, self-employed without employees, self-employed with employees, casual worker, contributing family worker, apprentice, domestic employee (house help). Persons who could not be classified under any of the above categories were classified as "other".

Employment Sector

This refers to the sector in which a person worked. The employment sectors covered in the census were public, private formal, private informal, semi-public/parastatal, NGOs and international organizations.

Disability

Persons with disability were defined as those who were unable to or were restricted in the performance of specific tasks/activities due to loss of function of some part of the body as a result of impairment or malformation. Information was collected on persons with visual/sight impairment, hearing impairment, mental retardation, emotional or behavioural disorders and other physical challenges.

Information and Communication Technology (ICT)

ICT questions were asked for both individuals and households. Persons having mobile phones refer to respondents 12 years and older who owned mobile phones (irrespective of the number of mobile phones owned by each person). Persons using internet facility refers to those who had access to internet facility at home, internet cafe, on mobile phone or other mobile device. Internet access is assumed to be not only via computer, but also by mobile phones, PDA, game machine and digital television.

Households having Personal Computers/Laptops refer to households who own desktops/laptop computers. The fixed telephone line refers to a telephone line connecting a customer's terminal equipment (e.g. telephone set, facsimile machine) to the public switch telephone network.

Fertility

Two types of fertility data were collected: lifetime fertility and current fertility. Lifetime fertility refers to the total number of live births that females 12 years and older had ever had during their life time. Current fertility refers to the number of live births that females 12-54 years old had in the 12 months preceding the Census Night.

Mortality

Mortality refers to all deaths that occurred in the household during the 12 months preceding the Census Night. The report presents information on deaths due to accidents, violence,

homicide and suicide. In addition, data were collected on pregnancy-related deaths of females 12-54 years.

Agriculture

The census sought information on household members who are engaged in agricultural activities, including the cultivation of crops or tree planting, rearing of livestock or breeding of fish for sale or family consumption. Information was also collected on their farms, types of crops and number and type of livestock.

Housing Conditions and Facilities

The UN recommended definition of a house as “a structurally separate and independent place of abode such that a person or group of persons can isolate themselves from the hazards of climate such as storms and the sun” was adopted. The definition, therefore, covered any type of shelter used as living quarters, such as separate houses, semi-detached houses, flats/apartments, compound houses, huts, tents, kiosks and containers.

Living quarters or dwelling units refer to a specific area or space occupied by a particular household and therefore need not necessarily be the same as the house of which the dwelling unit may be a part.

Information collected on housing conditions included the type of dwelling unit, main construction materials for walls, floor and roof, holding/tenure arrangement, ownership type, type of lighting, source of water supply and toilet facilities. Data was also collected on method of disposal of solid and liquid waste.

BRIEF NOTES ON RESULTS

INTRODUCTION

This report, which is the first publication released by Ghana Statistical Service (GSS) on the 2010 Population and Housing Census (PHC), presents a summary of the final results. It contains priority tables required by planners, researchers and other stakeholders for planning, and programme implementation. The report provides information on population and housing characteristics for the entire country, the 10 administrative regions and the 170 districts that existed at the time of the 2010 census.

POPULATION DISTRIBUTION

The data compiled from the 2010 Census questionnaires yielded a population of 24,658,823 (Table 1). The figure represents an increase of 30.4 percent over the 2000 census population of 18,912,079.

The data further indicate that the most populous region is Ashanti, with a population of 4,780,280, representing 19.4 percent of the country's total population followed by Greater Accra, with a population of 4,010,054 (16.3%). The least populous regions are Upper West with 702,110 persons constituting 2.8% of the total population and Upper East with 1,046,545 persons or 4.2% of Ghana's population (Figure 1).

Figure 1: Percentage share of population by region

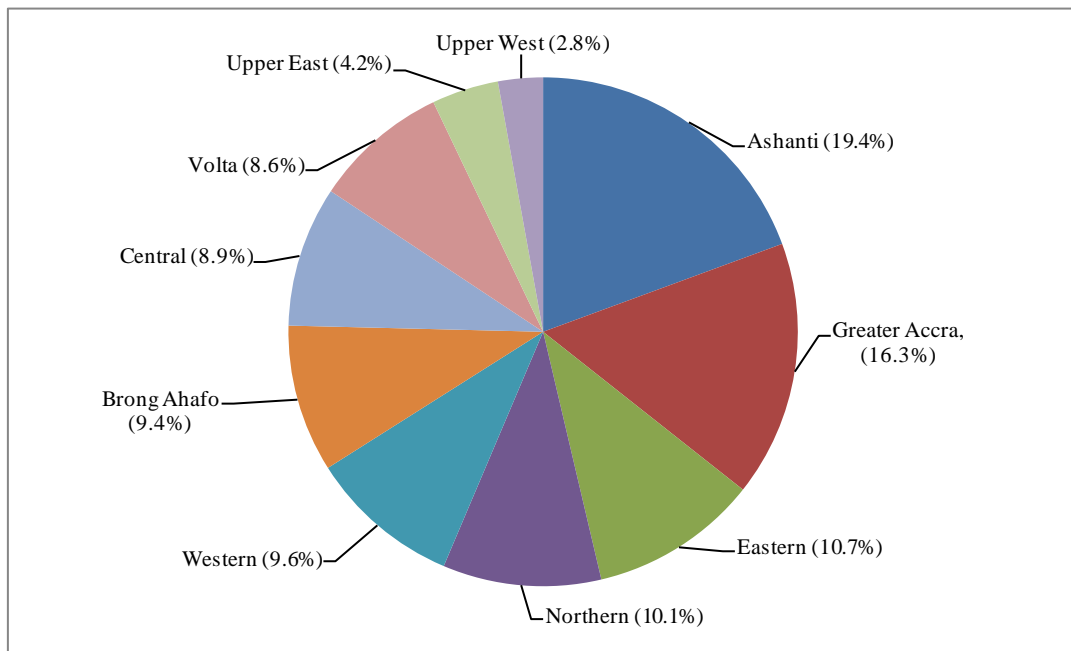

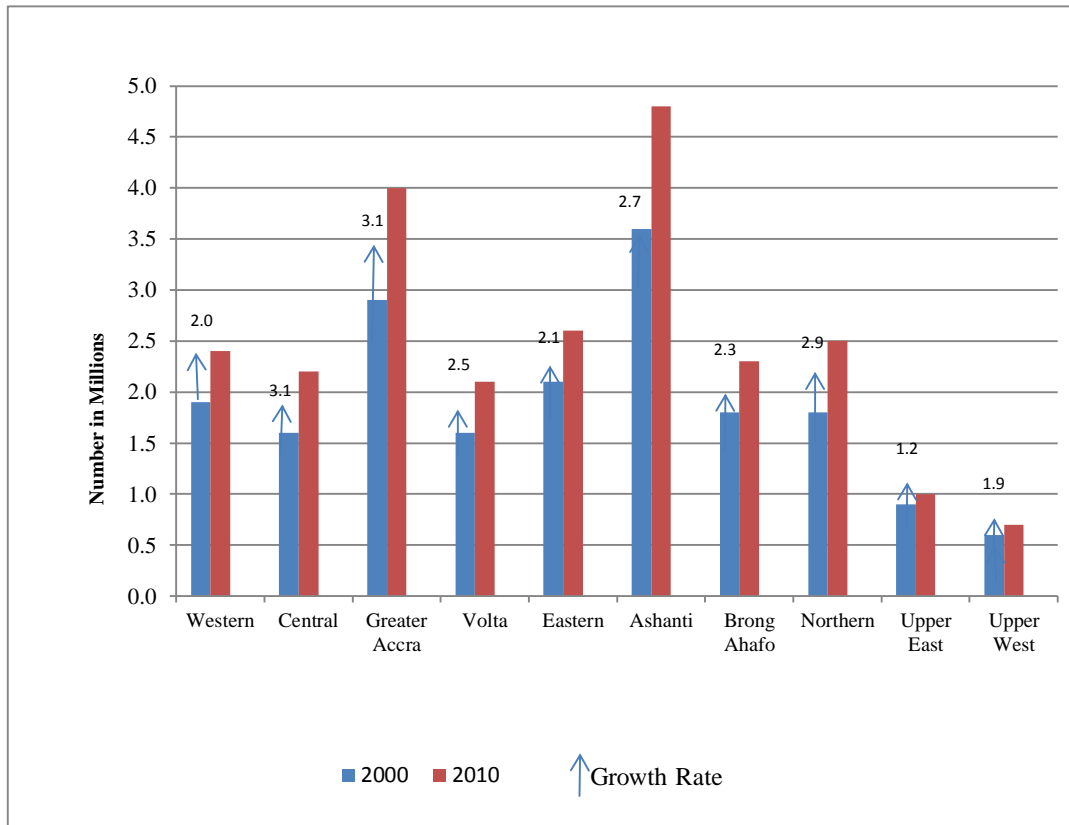

Table 1 shows that among the regions, Central recorded the highest percentage increase in the population (38.1%) over the 10-year period. It is followed closely by Greater Accra (38.0%), Northern (36.2%) and Ashanti (32.3%) regions. The regions with the lowest percentage increase in population are Upper East (13.7%) and Upper West (21.8%).

The annual average intercensal growth rate is 2.5 percent (Table 1). At this rate, it will take approximately 28 years for the population of Ghana to double. As shown in Figure 2, Greater Accra and Central regions recorded the highest population growth rates (3.1%), followed by Northern Region (2.9%), Ashanti (2.7%) and Volta (2.5%). The lowest growth rates were recorded for the Upper East (1.2%) and Upper West (1.9%) regions.

Figure 2: Population size and growth by region, 2000 and 2010

The distribution of the population by sex indicates that the male population is 12,024,845 and the female population is 12,633,978. This gives a sex ratio (i.e. number of males to 100 females) of 95.2 compared to 97.9 in 2000 (Table 1). The regional sex ratios show that there is predominance of females in all the regions except Western where the number of males is approximately equal to the number of females (100.0).

Table 2 shows that the population density rose from 79 persons per square kilometre in 2000 to 103 persons per square kilometre in 2010. The increase in population density implies more pressure on the existing social amenities, infrastructure and other resources in the country.

At the regional level, Greater Accra is the most densely populated region with a density of approximately 1,236 persons per square kilometre compared to 895.5 persons per square kilometre in 2000. It is followed by the Central region with a population density of 224 persons per square kilometre. The Northern region still remains the most sparsely populated region with a population density of 35 persons per square kilometre (Table 2).

Table 2 further shows that there are 5,467,136 households in the country, showing an increase of 47.7 percent over the number of households recorded in 2000. This gives an average household size of 4.4, indicating an average decline of 0.7 persons from the 5.1 recorded in 2000.

The results show that Ghana has a youthful population (Table 3 and Figure 3), consisting of a large proportion of children under 15 years, and a small proportion of elderly persons (65 years and older). The age structure of the country’s population is basically shaped by the effects of high fertility and decreasing mortality rate.

Figure 3: Age-sex structure of population

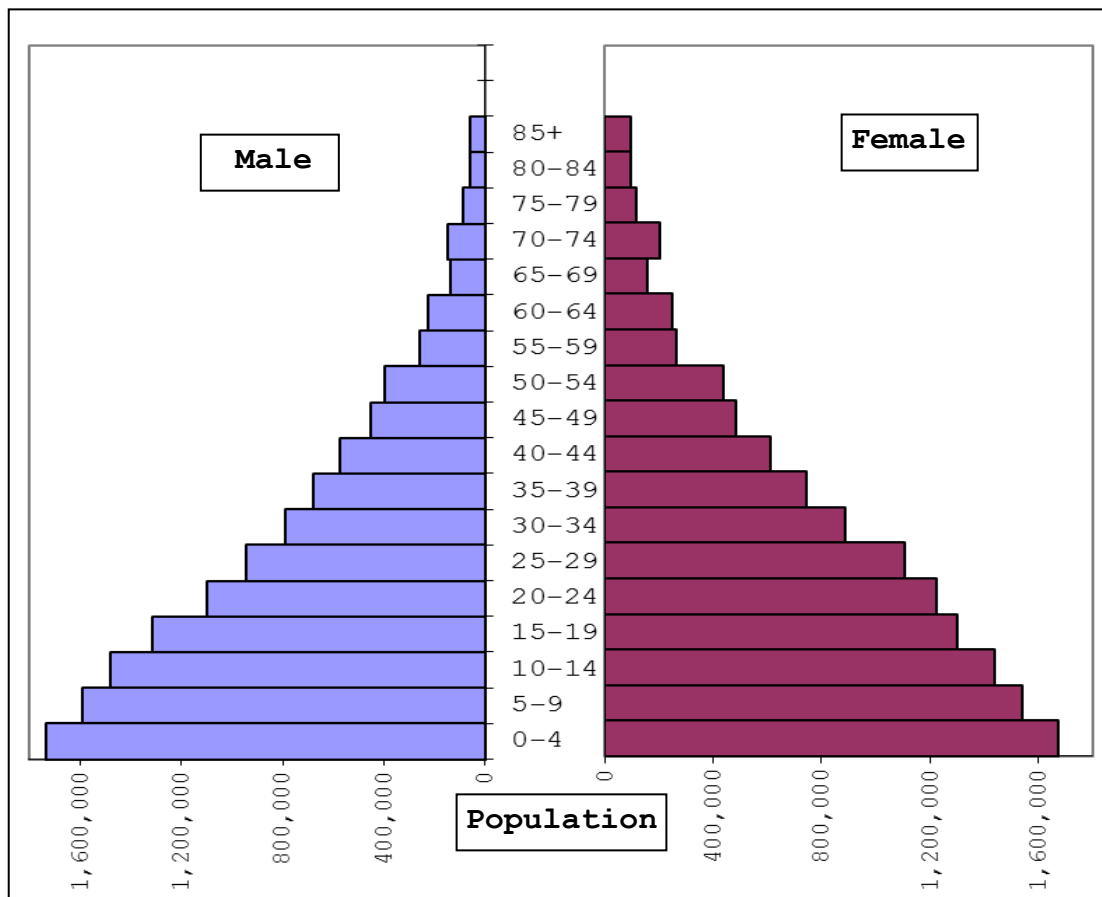

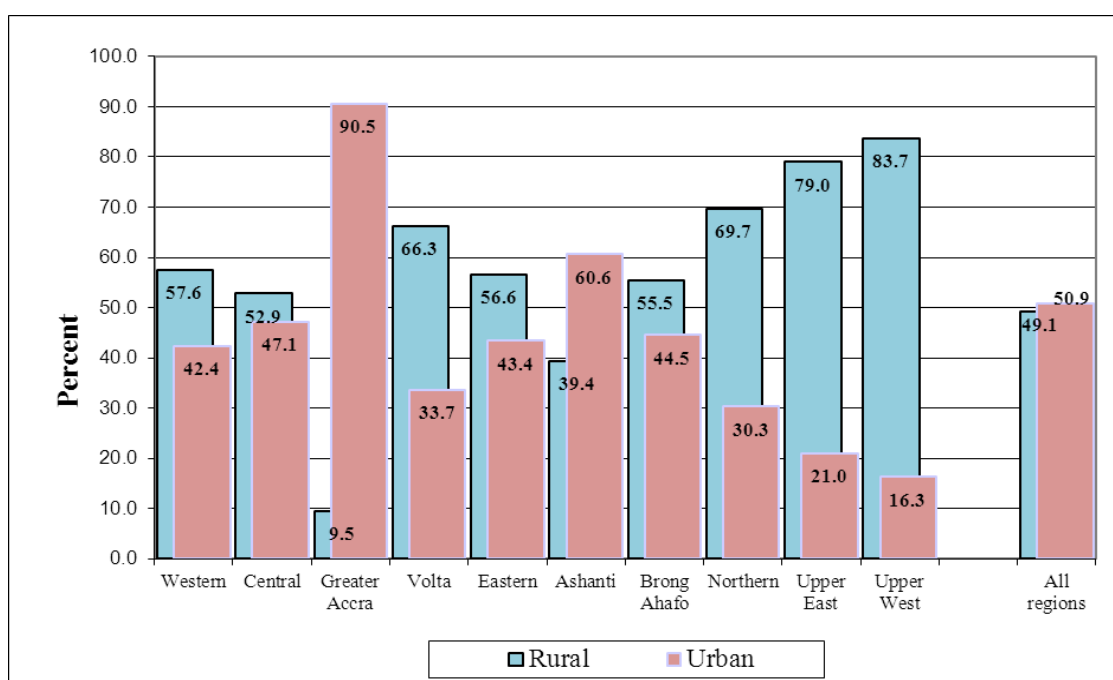

Table 3 also indicates that the proportion aged less than 15 years declined from 41.3 percent in 2000 to 38.3 percent in 2010. The proportion of the population 65 years and older has also declined slightly from 5.3 percent in 2000 to 4.7 in 2010.

As shown in Table 6, the proportion of the population living in urban areas is 50.9 percent. In 2000, the proportion of urban dwellers was 43.8 percent. The level of urbanization varies from region to region. Greater Accra has the highest proportion of urban population (90.5%), followed by Ashanti (60.6%) while Upper West has the lowest proportion of urban population (16.3%). The concentration of industries and commercial activities in Greater Accra and Ashanti may partly account for the relatively high urban population in these regions. The remaining eight regions are predominantly rural, with the level of urbanisation below the national average (Figure 4).

Figure 4: Population by type of locality (urban and rural)

HOUSEHOLD COMPOSITION AND STRUCTURE

Table 8 shows that 42.4 percent of household members are children, 22.7 percent are heads and 10.5 percent are spouses. In 2000, the corresponding proportions were 37.3 percent, 19.5 percent and 9.4 percent respectively. The proportion of other relatives in the household is 11.9 percent, having dropped from 21.7 percent in 2000. This may imply that households are becoming more nuclear.

Majority of households are headed by males (65.3%), with female-headed households constituting 34.7 percent. The proportion of male-headed households has been reducing steadily from 71.4 percent in 1970¹ to 65.3 percent in 2010.

NATIONALITY

The data show that 97.6 percent of the population is Ghanaian while 2.4 percent is Non-Ghanaian. Majority of the population is Ghanaian by birth (93.7%). Persons with dual nationality constitute 2.9 percent while Ghanaians by naturalization make up one percent. The proportion of male non-Ghanaians (2.7%) is marginally higher than the proportion of female non-Ghanaians (2.2%). ECOWAS nationals constitute the highest proportion of the non-Ghanaian population (1.7%) while other African nationals constitute 0.4 percent (Table 9).

The region with the highest proportion of non-Ghanaian population is Greater Accra (3.0%), followed by the three Northern regions, namely Upper East (2.9%), Upper West (2.9%) and Northern (2.8%).

¹ GSS, 1970 Population Census, Vol. III.

MARITAL STATUS

Table 10 shows that of the population aged 12 years and older, 42.9 percent were married while 42.0 percent had never been married. In addition, 10.2 percent had been married before but at the time of the census were separated, widowed or divorced. Table 12 further shows that a higher proportion of males (48.9%) than females (35.6%) had never been married. On the other hand, females are more likely to be married (43.9%) than males (41.7%). Again, the proportion of females divorced or widowed is higher than that of males.

There are notable regional variations in the marital status of the population. Greater Accra and Ashanti (46.3% and 44.2% respectively) have higher proportions of populations who have never been married. On the other hand, Northern region recorded the highest proportion (54.3%) of the married population.

Table 11 shows that a large proportion (93.6%) of the population of both sexes aged 12-17 years have never been married. The proportion of boys who have never been married (94.2%) is slightly higher than girls (93.1%). Only a small proportion of either sex is married, 5.2 percent boys and 5.6 percent girls.

ETHNICITY

Table 13 shows that the Akans are the predominant ethnic group in Ghana (47.5%), followed by the Mole Dagbani (16.6%), the Ewe (13.9%) and Ga-Dangme (7.4%). The Mande forms the smallest ethnic group (1.1%) in Ghana.

PLACE OF BIRTH

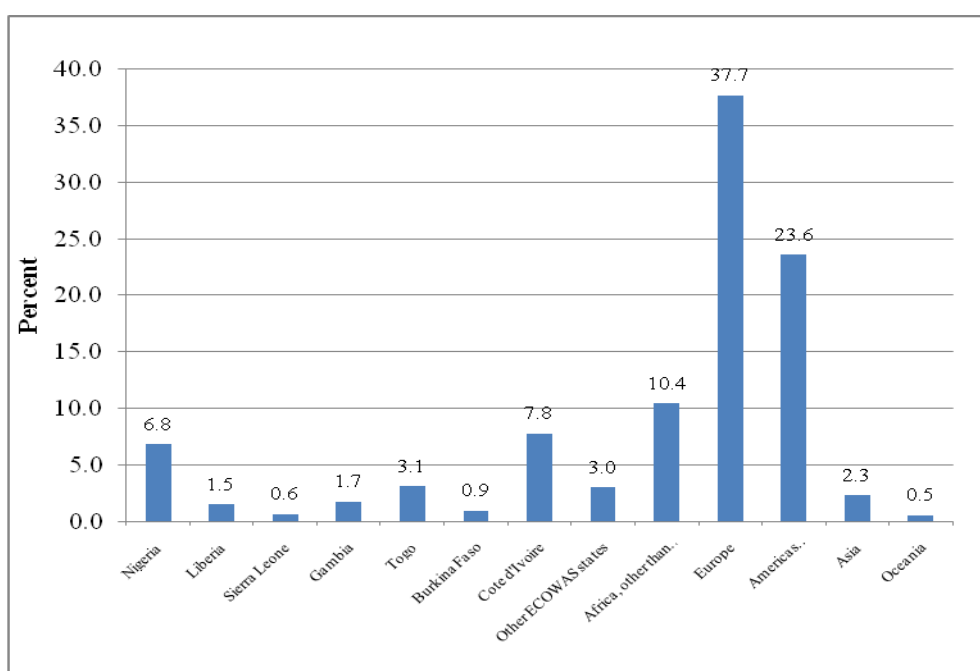

Data on birthplace and place of enumeration provide information on migratory movements of the population. Two out of three persons (65.0%) were born in the locality of enumeration while one in seven (15.0%) was born in another locality in the region of enumeration. About 19 percent of the population were born in other regions within Ghana and less than two percent (1.3%) was born outside Ghana. Of this number, majority were born in Togo, followed by Nigeria, Burkina Faso and Côte d'Ivoire.

At the regional level, the three northern regions, Upper East (88.6%), Northern (86.1%) and Upper West (82.9%) recorded the highest proportions of persons born in the locality of enumeration. On the other hand, Greater Accra (46.4%) and Ashanti (58.0%) regions recorded the lowest proportions of persons born in the locality of enumeration (Table 14).

GHANAIAN MIGRANTS ABROAD

Households reported on their former members who had emigrated outside the borders of Ghana for six months or more. The results indicate that there are 250,623 emigrants (representing one percent of Ghana's population), with Ashanti and Greater Accra regions constituting about half of the emigrants (Table 15). There are more male (160,276) emigrants than female (90,347) emigrants. Figure 5 shows that the destinations of most emigrants are Europe (37.7%), Africa (35.8%) and the Americas (23.6%). Of the 25.4 percent emigrants who were reported as residing in ECOWAS countries, most lived in neighbouring countries (Côte d'Ivoire, Nigeria and Togo). Most emigrants (76.2%) were gainfully employed, while 14.0 percent are students. The rest (6.1%) were unemployed (Table 15).

Figure 5: Place of destination of emigrants

REFLIGIOUS AFFILIATION

Table 16 shows that 71.2 percent of the population profess the Christian faith, followed by Islam (17.6%). Only a small proportion of the population either adhere to traditional religion (5.2%) or are not affiliated to any religion (5.3%).

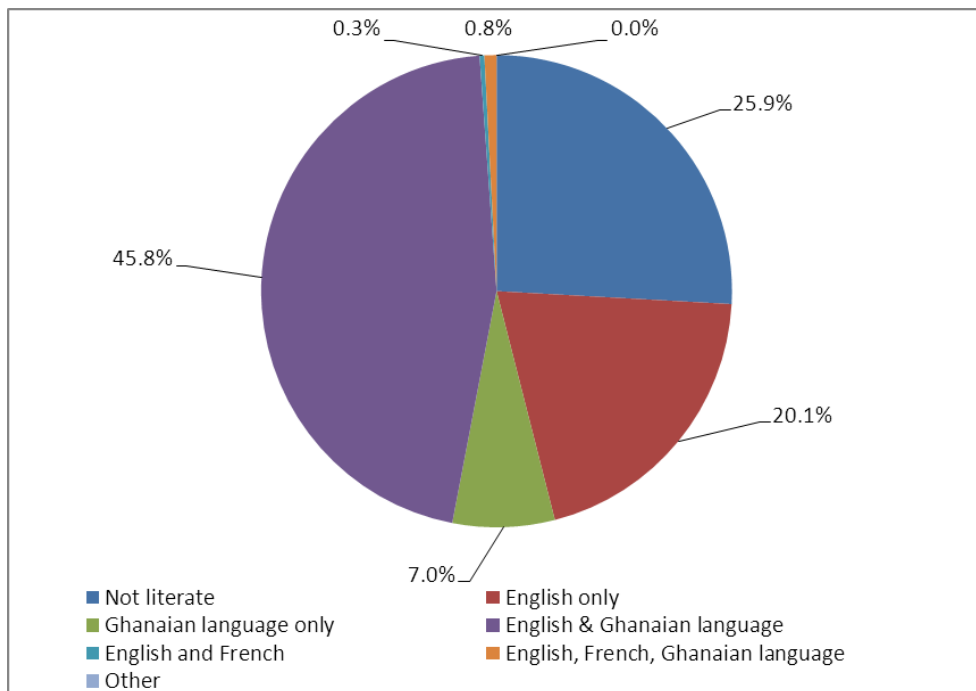

Apart from the Northern region where Islam is the dominant religion (60.0%), higher proportions of the population in the other nine regions are reported to be Christians. The region with the highest proportion of those who adhere to the traditional religion is Upper East (27.9 %), followed by Northern (16.0%) and Volta (14.1%). Brong Ahafo (7.3%) and Western (6.7%) regions have the largest proportions of population with no religion.

Generally, more females (73.4%) than males (68.8%) were reported as Christians. On the other hand, slightly more males (18.3%) than females (17.0%) belong to the Islamic religion. Again, more males (6.7%) than females (3.9%) professed to have no religion (Table 16).

LITERACY

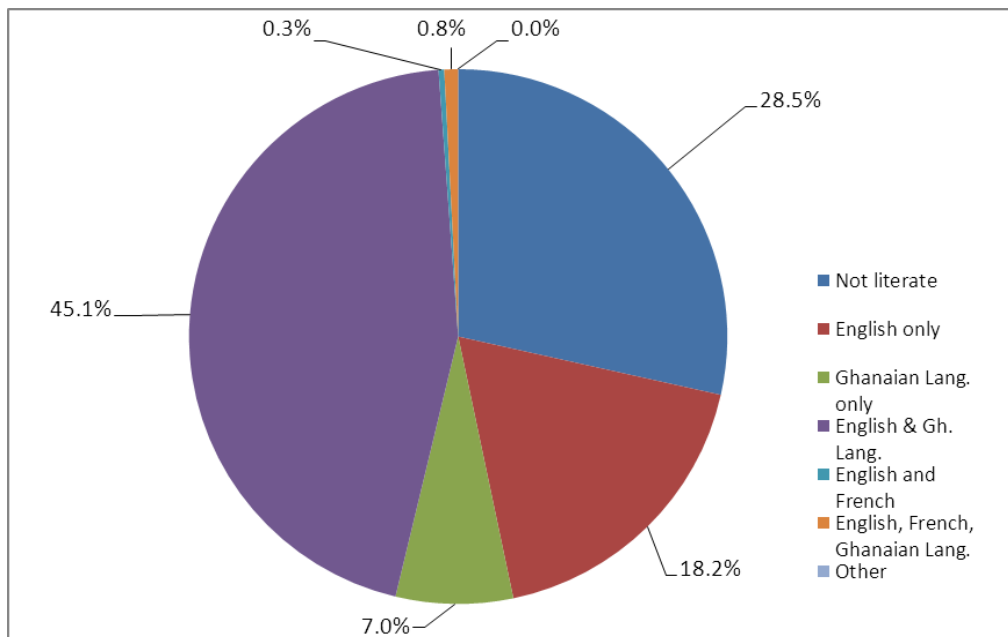

Table 17 shows that majority (74.1%) of the population 11 years and older is literate. A large proportion (67.1%) of the population can read and write in English. About one-fifth (20.1%) can read and write in the English language only while 53.7 percent of the population can read and write in at least one Ghanaian language (Figure 6a). In terms of sex, males (80.2%) are more likely to be literate than females (68.5%). Regional variations exist in literacy levels, with the three northern regions having less than 50 percent of the population aged 11 years and older as literate while the other regions have at least 69 percent of their population being literate.

Figure 6a: Literacy level of population 11 years and older

Compared with the 2000 census data, the level of literacy has increased tremendously. The proportion of the population aged 15 years and older reported as literate increased from 54.1 percent in 2000 to 71.5 percent in 2010 (Figure 6b). The change is greater for females (19.6%) than for males (15.4%).

Figure 6b: Literacy level of population 15 years and older

EDUCATION

Table 19a indicates that 23.4 percent of the population aged three years and older has never been to school. The proportion currently attending school and those who have attended school before are 39.5 percent and 37.1 percent respectively. The proportion of the population which has never attended school in the rural area (33.1%) is more than two times that of the urban area (14.2%). There is also a marked difference between males (9.1%) and females (14.3%) who have never attended school.

Among the regions, there are variations in the levels of school attendance. The proportions of the population who have never been to school in the three northern regions range between 44.5 percent in Upper East and 54.9 percent in the Northern region while in the other regions, it ranges between 10.1 percent in Greater Accra to 26.4 percent in Brong Ahafo.

Table 20b indicates that of those currently attending school, close to half (46.4%) are in primary school while 18 percent are in JSS/JHS. Only nine percent are in SHS. There is not much difference in current school attendance between the sexes and among the regions.

For those who had attended school in the past, Table 20c shows that 53.7 percent of them have Middle or JHS/JSS as their highest level of education while a smaller proportion (12.1%) had attended SSS/SHS. There are relatively more females (55.1%) than males (42.9%) with Primary and JSS/JHS as their highest level of education. This implies that females are more likely than males to drop out at the primary and JSS/JHS levels.

ECONOMIC ACTIVITY

This section presents information on the activity status, size and structure of the labour force, and its distribution by occupation, industry, sector of employment and employment status.

Table 23 shows that of the total population of 21,253,417 aged 5 years and older, 55.3 percent is economically active (employed and unemployed) while the economically inactive population (not employed, not seeking nor available for work) constitutes 44.7 percent. Of the economically active population, 93.1 percent are employed while the unemployed (that is, those without work but are seeking and available for work) make up 6.9 percent. Of those who are unemployed, majority (83.8%) of them are first time job seekers. The proportion of males who are economically active (52.2%) is slightly higher than females (50.8%). Females, on the other hand, are more likely to be unemployed (7.3%) than males (6.5%).

The results also show that students form a large proportion of the economically inactive population (66.1%). Of the remaining, the homemaker category constitutes 13.8 percent. A larger proportion of males (71.8%) than females (61.0%), are students. More females (17.9%) than males (9.3%) are homemakers.

Table 25 shows the activity status of the population aged 5-17 years. As expected, a large proportion (83.4%) of the population in this age bracket is economically inactive. Nearly 80 percent (79.7%) of the children who are not economically active are in full time education. Children who are too young to work constitute 10.9 percent of the economically inactive child population. Only 16.6 percent of the children are economically active. Of the economically active children, 81.9 percent are employed and 18.1 percent are unemployed.

Table 25 further shows that the proportion of economically active children is relatively high in Northern (38.2%), Upper West (32.2%) and Upper East (29.6%) regions. Ashanti recorded the lowest proportion of economically active children (8.7%). In all the regions, high proportions of economically inactive children are in full time education. There is not much difference between the proportion of boys and girls who are economically active and also in full time education (Figure 7).

Figure 7: Activity status of children 5-17 years by sex

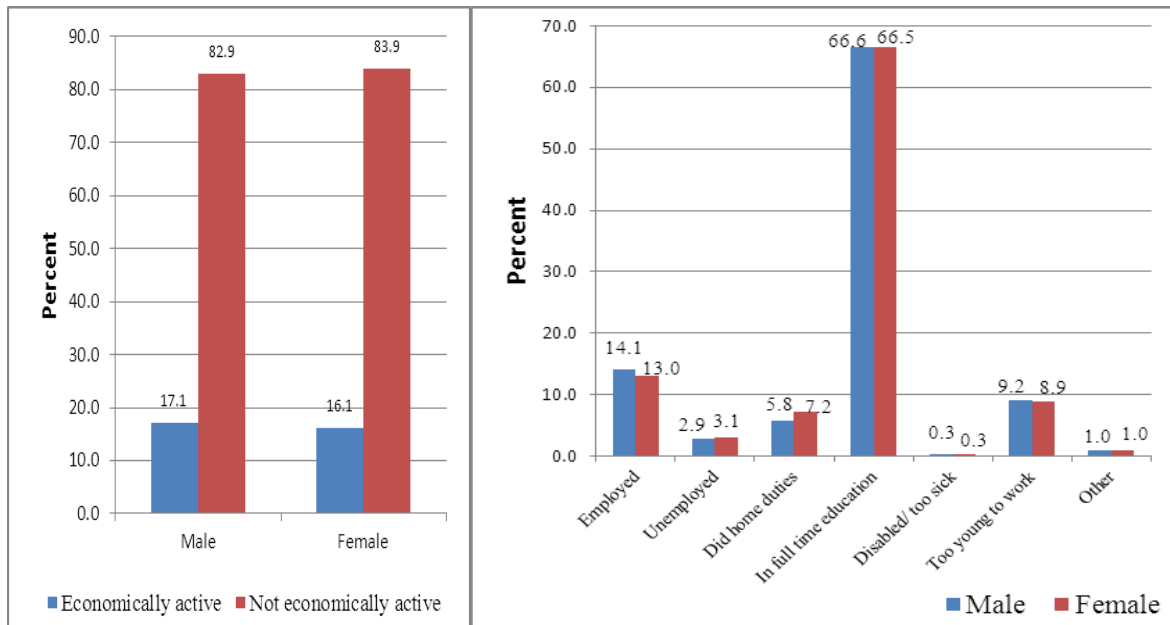

Table 26 depicts the activity status of the population aged 15 years and older. The data indicate that 71.5 percent are economically active and of these, most are employed (94.2%). Only 5.8 percent are unemployed. The data also show that females in this age group are more likely to be unemployed (6.3%) than males (5.4%).

The data further indicate that generally, most of the regions have relatively high proportions of economically active persons. However, the highest proportion of economically active persons is in the Northern region (74.8%) and the lowest is in the Ashanti region (69.6%). The proportion of unemployed population is highest in Greater Accra (8.3%) and lowest in Upper East (3.4%).

OCCUPATION

Table 27 shows that about two-fifth (41.3%) of the economically active population aged 15 years and older are skilled agricultural, forestry and fishery workers. About 21 percent is also engaged as service and sales workers while 15.2 percent are craft and related trade workers.

Skilled agricultural, forestry and fishery work remains the dominant occupation for both males (45.0%) and females (37.8%). However, a much higher proportion of females (31.3%) than males (10.0%) are engaged as service and sales work.

This pattern is generally the same for most of the regions, with the three northern regions (Northern, 73.6%; Upper East, 70.3%; Upper West, 72.6%) having relatively high

proportions of the economically active population engaged as skilled agricultural, forestry and fishery workers followed by Brong Ahafo (61.0%). However, in Greater Accra, most economically active population are more likely to be engaged as service and sales workers (35.3%) and less likely to be engaged as skilled agricultural, forestry and fishery workers (5.8%).

INDUSTRY

Table 28 shows that agriculture, including forestry and fishing, remains the largest industrial sector employing 41.6 percent of the economically active population aged 15 years and older. The next major industrial activities are wholesale and retail trade (18.9%) and manufacturing (10.8%).

Even though agriculture is the most predominant economic activity, there are regional variations in the proportions engaged in this activity. In the Northern and Upper West regions, more than 70 percent of the economically active population are engaged in agriculture, forestry and fishing activities. In Greater Accra, significant proportions of the economically active population are engaged in wholesale and retail trade (31.6%), manufacturing (14.8%) and accommodation and food service activities (9.0%), with only 5.2 percent engaged in agricultural activity (Table 28).

EMPLOYMENT STATUS

Data on employment status indicates that majority (64.8%) of the economically active population are self-employed (Table 29). Employees constitute 18.2 percent while contributing family workers make up 11.6 percent. Apprentices form only 2.7 percent of the economically active population.

Figure 8 indicates that a relatively large proportion of males (25.3%) compared to females (11.4%) are employees. Also, females are slightly more likely to be self-employed (69.3%) than males (60.0%). In addition, more females (14.3%) than males (8.7%) are engaged as contributing family workers.

Figure 8: Employment status of employed persons 15 years and older

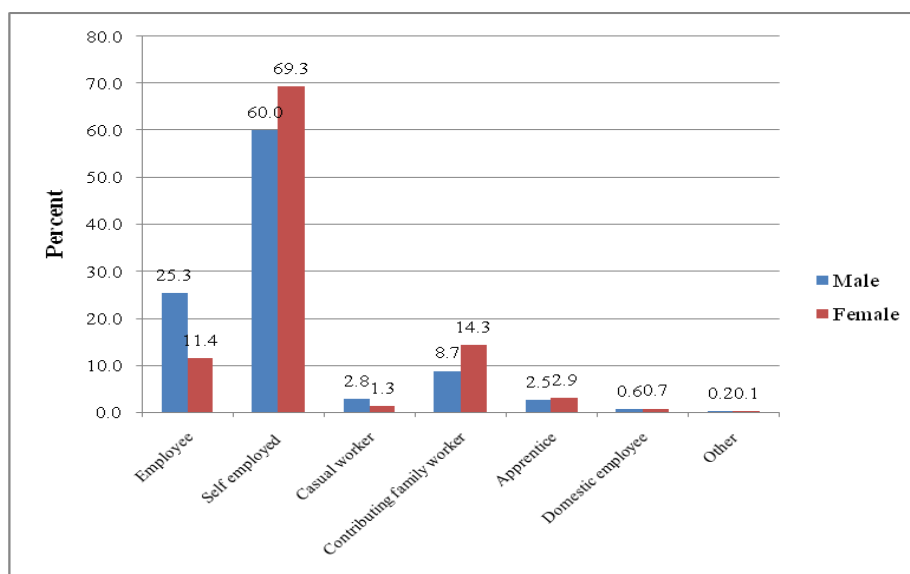

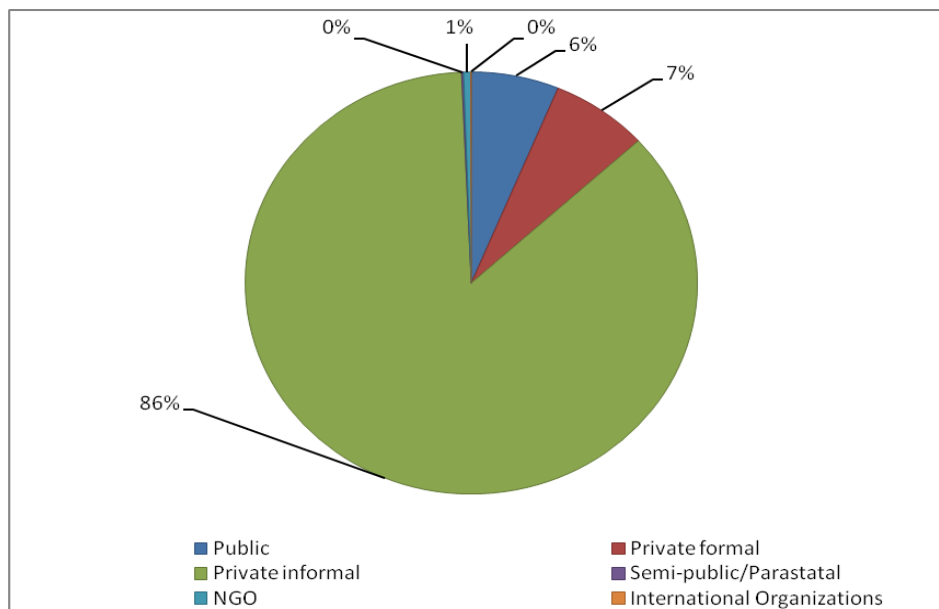

Table 29 further shows that generally, the proportion of the self-employed is high in all regions, with Volta (75.2%) recording the highest. Employees constitute the second largest category in Greater Accra (35.0%), Ashanti (19.8%), Western (19.3%), Central (16.7%), Eastern (15.2%) and Volta (11.3%). In contrast, contributing family workers are the second largest category after self-employed in Upper West (33.8%), Northern (28.4%), Upper East (25.1%) and Brong Ahafo (16.1%).

EMPLOYMENT SECTOR

Table 30 and Figure 9 show that the private sector is the largest employer in the country, accounting for 93 percent of the economically active persons (private informal, 86.1% and private formal, 7.0%). The public sector, which is the second largest employer, accounts for only 6.3 percent. The private informal sector remains the largest employer of the working population irrespective of sex and region of residence. However, Greater Accra (25.5%), Western (14.0%) and Ashanti (13.7%) regions have relatively more employees in the formal sector (public or private formal) than the other seven regions.

Figure 9: Employment sector of the employed persons aged 15 years and older

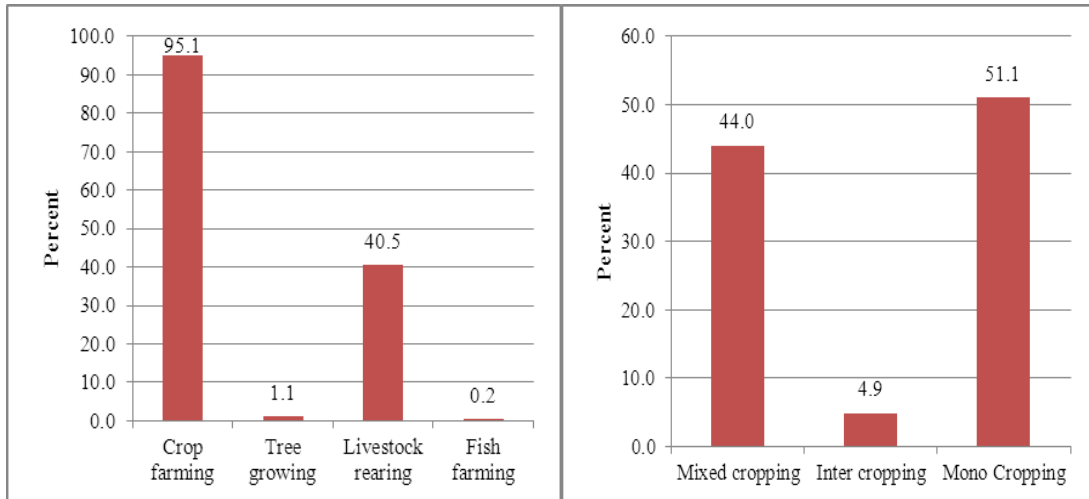

ENGAGEMENT IN AGRICULTURAL ACTIVITIES

The question on agriculture sought to find out whether any member of the household was engaged in agricultural activity i.e. involved in crop farming, tree planting, fish farming or animal rearing at the time of the census². If at least one member engaged in one agricultural activity or another, such a household is qualified as an agricultural household. Table 31 shows that overall, 45.8 percent of all households in Ghana are agricultural households. Of the number of agricultural households, a higher proportion is engaged in crop farming (95.1%) compared to those engaged in livestock rearing (40.5%) and tree growing (1.1%). Barely one percent of households that engage in agricultural activities are into fish farming (Figure 10).

² Some households reported more than one agricultural activity.

Majority of the agricultural households are either into mono cropping i.e. having one crop on a field³ or plot (51.1%) or mixed cropping i.e. having two crops on a field (44.0%). Intercropping (planting more than two crops on a field) type of farming is carried out by only 4.9 percent of household members. This general pattern is reflected in all the regions. The proportion of households engaged in livestock rearing in each of the three northern regions is relatively high (more than three-fifth) compared to the other seven regions (Table 31).

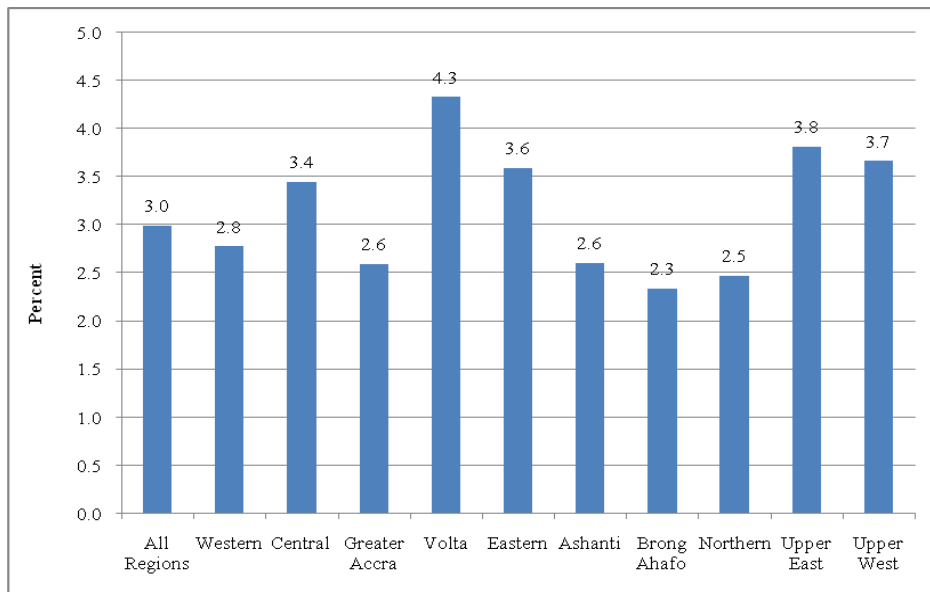

Figure 10: Percentage of households engaged in agricultural activities by type

DISABILITY

Table 32 shows that there are 737,743 persons with some form of disability, representing 3.0 percent of the total population. The data also show that there are more females (52.5%) than males (47.5%) with some form of disability (Figure 11).

Figure 11: Population with disability by region

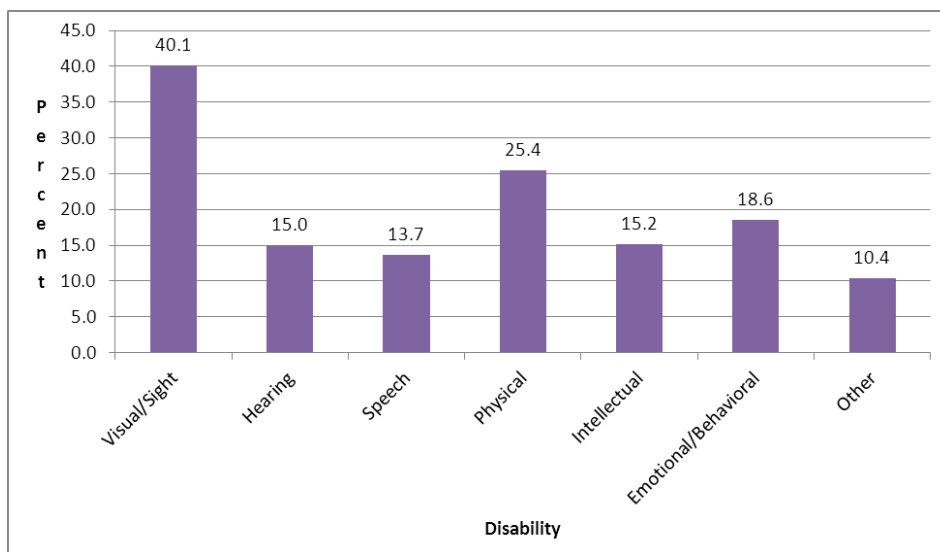

³ In Ghana, field or plot is a farm.

The regional distribution indicates that Volta region (4.3%) has the highest proportion of population with disability, followed by Upper East (3.8%), Eastern (3.6%) and Central (3.4%) regions. Brong Ahafo (2.3%) has the lowest proportion of persons with disability.

Figure 12 shows that the population with some form of disability, visual or sight impairment (40.1%) is the most common disability, followed by physical challenges (25.4%), emotional/behavioural problems (18.6%) and intellectual malfunctioning (15.2%). Visual or sight impairment is also the most common form of disability among both males (38.0%) and females (42.0%).

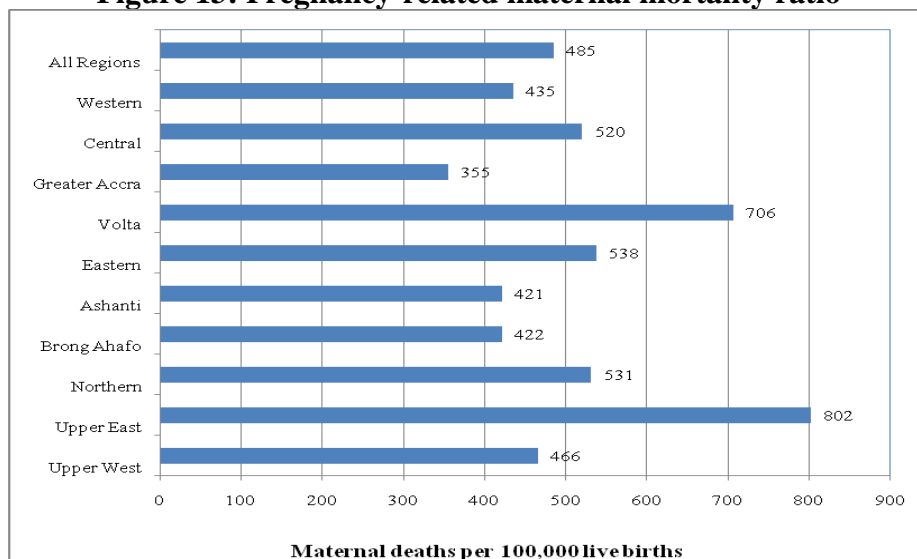

Figure 12: Population with disability by type

PREGNANCY RELATED MATERNAL MORTALITY

Table 33 shows that 33,347 women died in the last 12 months preceding the census. Out of the number, 3,026 are recorded as pregnancy-related deaths (i.e. died during pregnancy, delivery or within 42 days the termination of a pregnancy).

Figure 13: Pregnancy-related maternal mortality ratio

The data also show that there are 623,700 live births in the last 12 months. In all, five regions - Greater Accra, Ashanti, Brong Ahafo, Western, and Upper West - recorded maternal mortality ratios below the national average (485 maternal deaths per 100,000 live births). However, Volta and Upper East regions recorded ratios far above the national average (Figure 13).

TELECOMMUNICATION

Table 34 shows that only 2.3 percent of households in Ghana have fixed telephone lines while 7.9 percent of households own either laptops or desktop computers. The proportion of households with these facilities is substantially low in most of the regions. However, in Greater Accra and Ashanti, relatively higher proportions of households own either laptops or desktop computers (16.8 percent and 9.3 percent respectively).

Table 34 also indicates that 47.8 percent of the population 12 years and older own mobile phones while only 7.8 percent use internet facility. Ownership of mobile phones by individuals is much higher in Greater Accra (73.5%) and Ashanti (56.1%). In each of the other eight regions, the proportion of the population aged 12 years and older who own mobile phones is below the national average.

The data further show that males are more likely to own mobile phones and use the internet than females irrespective of locality and region of residence. Urban dwellers are more likely to own mobile phones (63.4%) and use the internet (12.7%) than rural dwellers (29.6% and 2.1% respectively). This pattern is reflected in all the regions.

HOUSING CONDITIONS

Stock of houses

Table 35 indicates that the total stock of houses in the country is 3,392,745. The proportion of houses in rural areas (57.7%) is higher than those in urban areas (42.3%). The data further show that the stock of houses increased by 60.1 percent compared with the figure recorded in the year 2000. The regional distribution shows that Ashanti (16.9%) has the highest proportion of houses, followed by Greater Accra (14.0%) and Eastern (12.7%) regions. The Upper West region has the lowest proportion of the housing stock (2.4%). Compared with the 2000 Census data, there are marked differences in the percentage change in housing stock across regions. The increase is highest in Ashanti (81.9%) and lowest in Upper East (30.4%).

The population per house is 7.3 and ranges from a low of 5.3 in the Volta region to a high of 9.6 in the Northern region. Generally, there is a reduction in the population per house from 8.7 to 7.3 between 2000 and 2010.

Dwelling Unit

Table 36 shows that there are 5,817,607 dwelling units. The data also show that most households reside in rooms in compound houses (51.5%) and separate houses (28.7%). This observation is reflected across regions. Makeshift dwelling units such as tents, kiosks, containers and attachment to shops or offices together constitute 2.0 percent. In all regions,

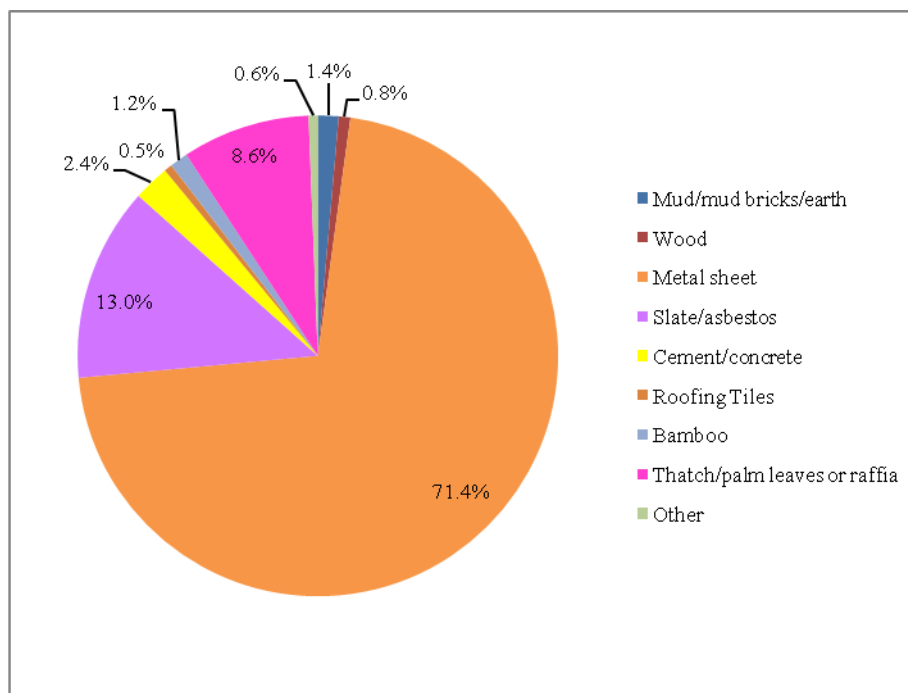

the proportion of makeshift structures is less than one percent except Greater Accra (6.2%) and Ashanti (1.8%) which have relatively higher proportions of makeshift structures.

Construction Material

As shown in Table 36, cement blocks or concrete (57.5%) are the main construction material used for the outer walls of dwelling units, followed by mud bricks or earth (34.2%). Only 3.4 percent of construction material is made of wood. Table 36 further shows that there are regional differences in the two main materials used for construction. Six regions - Greater Accra (82.2%), Ashanti (71.9%), Central (57.4%), Western (50.1%), Eastern (54.0%), and Brong Ahafo (46.5%) - recorded higher proportions of households using cement blocks or concrete as the main material for the construction of outer walls of their dwelling units. In contrast, in the four other regions (Upper East (80.7%), Upper West (75.0%), Northern (72.9%) and Volta (48.1%)), mud bricks or earth is the main material used for the construction of outer walls.

Figure 14 shows that metal sheets is the main material used for roofing (71.4%) dwelling units. This is followed by slate/asbestos (13.0%) and thatch or palm leaves or raffia (8.6%).

Figure 14: Main construction material for roof

The distribution by region suggests that metal sheet is the main roofing material used in all regions (Table 36). However, slate/asbestos is the second roofing material used after metal sheet in Greater Accra (41.7%), Central (25.8%) and Western (15.3%) while thatch comes second in Northern (34.9%), Volta (18.7%), Upper East (16.8%) and Brong Ahafo (14.4%) regions.

More than three-quarters (77.8%) of households use cement or concrete for the floor of their dwelling units. Earth/mud (16.0%) is also used by a significant proportion of households for the floor of their dwelling units. This pattern is exhibited in all the regions.

Tenure and Holding arrangement

The 2010 census revealed that nationally 47.2 percent of dwelling units are occupied by their owners, 31.1 percent are rented out and 20.8 percent are occupied rent-free (Table 36). With the exception of Greater Accra (47.0%) and Ashanti (38.0%) regions where relatively high proportions of the dwelling units are occupied by tenants, owner-occupied dwelling units are predominant in all the other regions (ranging from 46.1 percent in Central to 86.8 percent in Upper East).

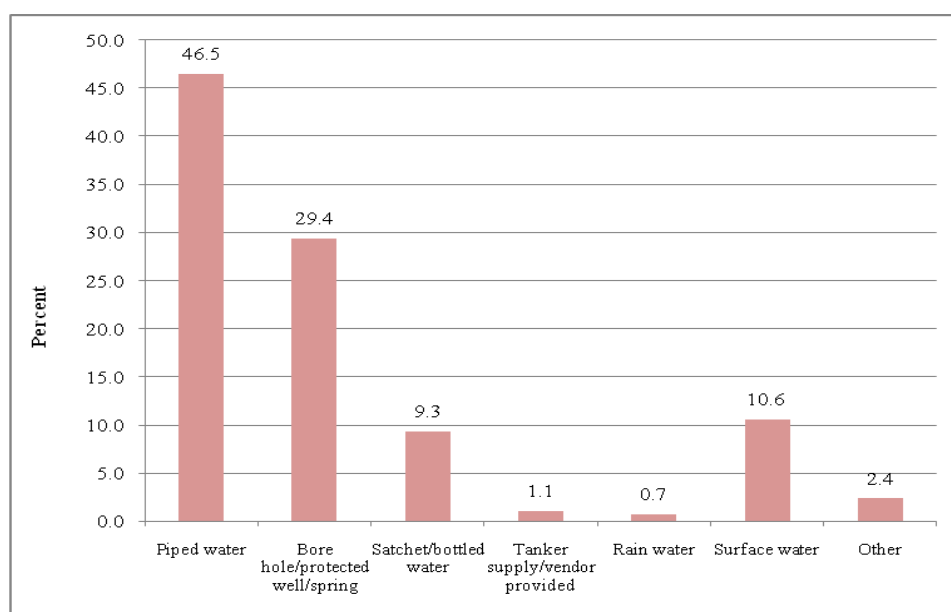

Also, 52.7 percent of dwelling units are owned by household members, while 26.3 percent are owned by other private individuals (Table 36). Another 15.6 percent are owned by relatives who are not household members. Only 3.7 percent of the dwelling units are owned by employers (public and private). Ownership of dwelling units by household members, private individuals and relatives who are not household members is predominant in all regions. In Greater Accra, however, a significant proportion of dwelling units (40.8%) are owned by other private individuals.

Household Facilities and Amenities

The data indicate that 44.5 percent of households occupy only one room, 24.8 percent occupy two rooms and 11.6 percent three rooms. The table also show that more than half (54.4%) of household members sleep in single rooms, 24.3 percent sleep in two rooms and about 10 percent sleep in three rooms. Only 11.2 percent of households sleep in four or more rooms. More than 60 percent of households in Ashanti (64.5%), Central (64.0%) and Greater Accra (61.2%) sleep in single rooms, while in the three northern regions the proportion of households that sleep in single rooms is less than 25 percent.

Figure 15 shows that 46.5 percent of households use pipe-borne water as their main source of drinking water, while 29.1 percent use borehole or protected well. In addition, 9.4 percent rely on sachet or bottled water. About one-tenth (10.6%) of households depend on surface water such as rivers, streams, dams, canals and ponds for drinking. Less than one percent (0.7%) of households depends on rainwater for drinking purposes.

Figure 15: Main source of drinking water

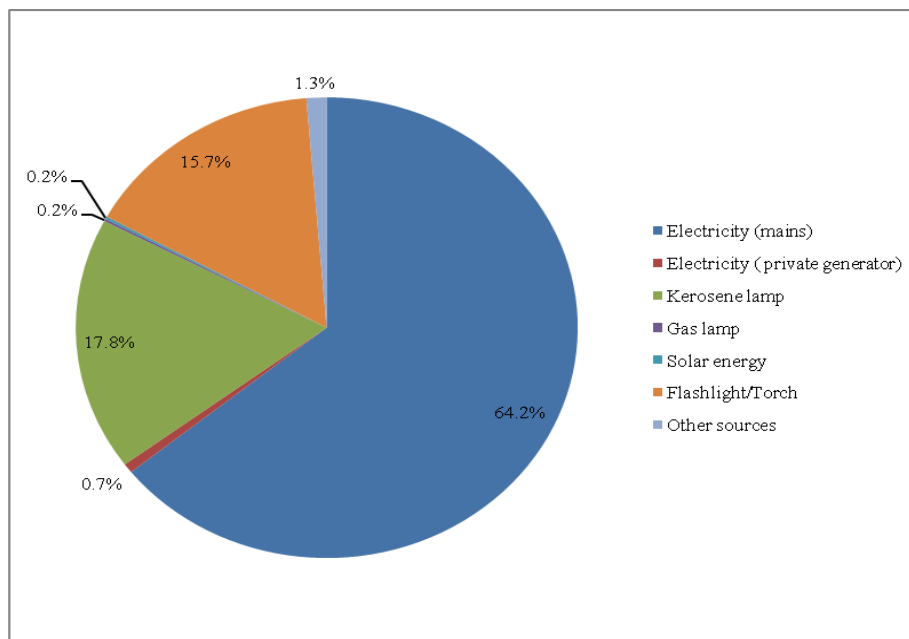

Greater Accra (64.4%), Central (53.5%) and Ashanti (50.8%) are the regions where more than half of households have access to pipe-borne water. With the exception of Greater Accra where sachet water (28.0%) is second after pipe-borne water, the use of protected wells and boreholes as an alternate source of good drinking water is common in all regions. Higher proportions of households in Upper East (70.2%) and Upper West (67.9%) use protected wells and boreholes as their main sources of drinking water.

The pattern is similar for sources of water for other domestic uses. A sizable proportion of households depend on piped water, boreholes and protected wells for other domestic purposes.

More than sixty percent (64.2%) of households use electricity (mains) as their main source of lighting, 17.8 percent use kerosene lamp and 15.7 percent use flashlight or torch light (Figure 16). In the seven southern regions, most households use electricity as their main source of lighting. The proportions of households using electricity range from a high of 87.1 percent in Greater Accra to a low of 49.6 percent in Volta. On the other hand, kerosene lamp is the major source of lighting for households in Upper East (45.5%) and Northern (42.3%) regions. For households in the Upper West region, the predominant lighting system used is either flashlight or torch (45.0%).

Figure 16: Main source of lighting

On cooking fuel, Table 36 indicates that about 40 percent of households use wood as the major source followed by charcoal (33.7%) and gas (18.2%). The regional distribution shows that a greater proportion of households use wood as their main cooking fuel in all the regions, except Greater Accra and Ashanti where charcoal is the main cooking fuel for most households. Seven in every 10 households in Northern and Upper West Regions, however, use wood as the main cooking fuel. Also, the use of gas as cooking fuel is highest in Greater Accra (41.4%) followed by Ashanti (21.1%).

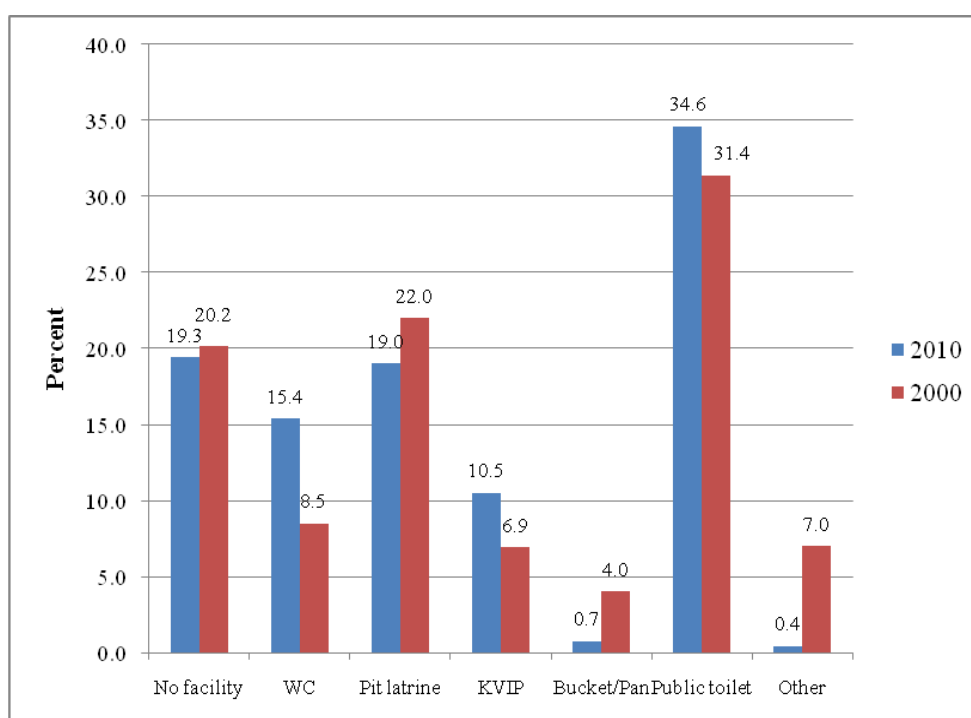

About one-third of households have separate rooms used exclusively for cooking, while 21.5 percent and 20.4 percent of households cook on the veranda and in the open space respectively. This pattern is reflected in all 10 regions (Table 36).

One-third of households share separate bathrooms in the same house. Another 28.1 percent have their own bathrooms which are used exclusively (Table 36). A relatively high proportion of households also share open cubicles (18.3%). In the Upper East and Upper West regions, more than two-fifths of households have their own bathrooms used exclusively while Ashanti has the highest proportion of household sharing separate bathrooms in the same house (44.5%).

Toilet facilities

Figure 17 shows the percentage distribution of toilet facilities by type. The proportion of households using public toilet facility has increased from 31.4 percent in 2000 to 34.6 percent in 2010. On the other hand, the proportion of households that use Pit latrine reduced from 22.0 percent in 2000 to 19.0 percent in 2010. Similarly, the proportion of households without toilet facility decreased from 20 percent in 2000 to 19.3 percent in 2010. There are 19.3 percent households without toilet facility. The proportion of households using WC has increased from 8.5 percent in 2000 to 15.4 percent.

Figure 17: Percentage distribution of toilet facilities by type

Again, Table 36 indicates that about 16.9 percent of households have toilet facilities that are exclusively used by their members. Another 26 percent of households use facilities that are shared with other households in the same house or households from another house. A small proportion of households (2.8%) use toilet facilities located in another house and shared with other households.

With the exception of the three northern regions, public toilet is the main toilet facility used by large proportions of households in all regions, ranging from 30 percent in Volta to 44 percent in Brong Ahafo. About 72 percent of households in the three northern regions have no access to a toilet facility.

Waste disposal

Table 36 shows that 37.7 percent of households dispose of their solid waste in open space at public dumps and about one-quarter (23.8%) dispose of their solid waste into public containers. Significant proportions of households either have their solid waste collected (14.4%) or burned (10.7%). In the regions, most households dispose of their solid waste at public dumps, either in containers or in open space. However, in Greater Accra, almost half (48.5%) of households have their solid waste collected from their homes. A significant proportion of households in Greater Accra (25.7%) dump their solid waste in containers. The proportions of households which dump their solid waste indiscriminately is highest in the Upper West (36.0%) region followed by the Northern region (26.4%).

Table 36 again shows that a little over one-third (35.2%) of households throw their liquid waste onto the compound of their homes. Another 28.1 percent of households throw their liquid waste either onto the street or outside their houses, while 18.7 percent of households throw their liquid waste into gutters. Only 10.9 percent of households dispose of their liquid waste through plumbing systems into gutters. This pattern is observed in all the regions.

SUMMARY TABLES

Table 1: Distribution of population by region, sex and locality of enumeration, 2010

Region	Total Population	Male	Female	Locality of enumeration		Share of Population (%)	Proportion urban	Sex Ratio	Percentage increase over 2000	Intercensal Growth Rate (%)
				Urban	Rural					
All Regions	24,658,823	12,024,845	12,633,978	12,545,229	12,113,594	100.0	50.9	95.2	30.4	2.5
